

**What is the student experience like  
on GCSE Prepper?**

5. Students can see progress by section to understand their strengths and weaknesses (see page 11)

1. The student dashboard displays 1 tile for each class

2. The tiles are colour-coded:

- Red - if homework is overdue
- Amber if there is homework - but the deadline hasn't passed
- Green - if all homework has been completed

**AQA Chemistry Higher** !

Status: You have some work overdue!

## Energy revision

Status: Overdue

Due: Monday 6th February 2023  
Topic(s): AQA > Physics Combined Higher > 1. Energy  
Answered Questions: 8 / 40

Take Revision Task

2. Students click on 'Take Revision Task' to start a piece of homework (see pages 4 & 5)

1. The tiles are colour-coded:

- Red - if homework is overdue
- Amber if there is homework - but the deadline hasn't passed
- Green - if all homework has been completed

## Finished Revision Tasks

### Electricity

Status: Complete

Due: Saturday 28th May 2022  
Topic(s): AQA > Physics Combined Higher > 2. Electricity > 2...  
Answered Questions: 77 / 82

Review Revision Task

### Fleming

Status: Complete

Due: Monday 26th September 2022  
Topic(s): AQA > Physics Combined Higher  
Answered Questions: 8 / 8

Review Revision Task

3. Students click on 'Review Revision Task' to review marked homework (see pages 6 & 7)

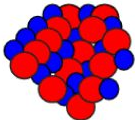

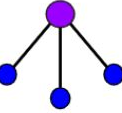

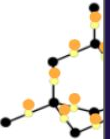

## Homework

Looking for old homework? They now have their own page.

# Student completing their homework 1

Q2 of 7

Compounds	Structure
Sodium bromide	 Key Na <sup>+</sup>  Cl <sup>-</sup> 
Ammonia	 Key N  H 
Silicon dioxide	

The image to the left shows the structure of three compounds.

Describe the structure and bonding of ammonia.

Make as many points as you can in the boxes below:

- Students can click on the 'Need A Hint?' button if they don't know the answer
- This will open a revision guide in a new window - it will open at the correct page

## Student completing their homework 2

Q5 of 7

The image to the left shows the position of potassium and fluorine in the periodic table.

Potassium atoms react with fluorine atoms to produce potassium fluoride (KF). Describe the electron transfer that takes place when ONE atom of potassium reacts with ONE atom of fluorine.

fluorine ion ❌

fluorine ATOM [Do not accept fluorine ion - as it becomes an ion] gains

an electron ✅

The potassium atom ✅

loses an electron ✅

Students see a mark and detailed feedback after every attempt - tailored to the answer they have provided

Next Question

## Student revising 1

3. Optimised mode only becomes available to students when teachers have set students more than 50 questions on the platform

1. Student can choose between revising in optimised mode or manual mode

The screenshot shows a dark blue modal window titled "How do you want to revise today?". It contains two options: "Optimised Mode" (highlighted in light green) and "Manual Mode" (highlighted in dark blue). The "Optimised Mode" option includes a description: "Our algorithm will analyse your previous activity, then select the best set of questions for you personally." and a "Start Now!" button. The "Manual Mode" option includes a description: "Gives you full control on the topics you wish to focus on, and the number of questions you wish to answer" and a "Start Now!" button. A red 'X' icon is in the top right corner of the modal. Blue arrows point from external text boxes to the modal title, the "Optimised Mode" box, and the "Manual Mode" box.

### How do you want to revise today?

**Optimised Mode**  
Our algorithm will analyse your previous activity, then select the best set of questions for you personally.  
**Start Now!**

**Manual Mode**  
Gives you full control on the topics you wish to focus on, and the number of questions you wish to answer  
**Start Now!**

4. Optimised mode prioritises questions for students based on their previous performance on the platform. Questions are selected from topics that the student has already been tested on

2. Manual mode works in the same way as it does for teachers. See pages 7 & 8
